# T-RAD®-600

Times Microwave Systems' T-RAD 50 ohm, leaky feeder coax radiating cables provide cost effective radio frequency coverage in enclosed or underground areas, where single point source antennas are not practical. Applications include: metro stations, tunnels, mines, ships, and in-building wireless systems. T-Rad cables may also be used as a single backbone, supplying multiple services across a broad frequency range from AM radio rebroadcast through the higher frequency 802.11 WLAN applications. T-RAD-600s flexibility, combined with Times' "EZ" attachment connectors makes quick and easy installations possible for a wide variety of interior communications applications.

## Tunnels/Rail-Transit

Times Microwave supplies T-RAD-600 cable for a wide variety of tunneling applications, including the use of T-RAD-600 cable to provide communications for the PATH rail tunnels at the World Trade Center site in New York City. T-RAD-600 is used as a backbone to provide radio frequency coverage throughout the mile long rail tunnels between New Jersey and lower Manhattan. A cascaded amplifier system offsets the attenuation and coupling losses, which are characteristics of all leaky feeder systems.

## In-Building Communications

T-RAD-600 cable successfully provides broadband coverage in building applications for VHF, UHF, cellular, PCS and 802.11b WLAN frequencies. Typically this cable is run through a building, where point source antennas are not practical. The T-RAD's flexible design allows it to be routed easily for quicker and more cost effective installation. With the use of cross-band couplers a single T-RAD cable backbone can support multiple use frequencies.

## Mining Applications

T-RAD-600 leaky feeder cables are used to provide underground communications for a wide variety of mining applications. The cable is run throughout the mining tunnels and allows a controlled amount of signal to leak into the surrounding environment. This

enables the cable to receive and transmit, where radio frequency coverage is required. T-RAD cable can be run into splitters, providing a means to run leaky feeder cable into any shadowed or cross-tunnel areas.

## Perimeter Detection Systems

Times Microwave supplies T-RAD-600DB cable for direct burial detection system applications. This cable provides coverage around highly sensitive areas that need added security, such as prisons, nuclear facilities and military installations. The T-RAD cable radiates a signal creating an EMF field, which when compromised detects intrusions and alerts security personnel.

## Our Mission

TIMES MICROWAVE SYSTEMS designs and manufactures high performance RF and microwave transmission lines. These products consist of flexible coaxial cables, connectors, accessories and cable assemblies.

We are committed to understanding the needs and requirements of our customers and providing highly engineered, cost effective products. TIMES MICROWAVE SYSTEMS is dedicated to *total* customer satisfaction and superior results for our shareholders in all we do.
