

- Easy to operate
- Built in positioner
- Small and light weight
- Precision Crimp Depth
- Full cycle ratchet
- Less operator error

The Astro Special Purpose Crimp Tool eliminates operator error caused by improper depth adjustment or incorrect positioner selection. This precision crimp tool meets the performance requirements of the **M22520** tools and was designed for miniature and sub-miniature contacts. The tools are light weight, easy to operate and the built in positioner cannot be adjusted improperly or lost. Astro uses a commonly accepted color coding system for this line of tools that results in easy assembly line identification. This tool is set at the factory to your

precise specifications and is non adjustable. This eliminates operator error and ensures that accurate crimps are obtained every time. These crimpers are designed to handle 20-32 AWG.

Cost is always a factor in the selection of tooling. These tools will not only save money, initially, but additional savings will be realized by time saved in production and quality control.

Let Astro help you design a tool to fit your special production needs.

Also available in Pneumatic versions.
