

Active 2 Way Power Divider for GPS L1/L2 & GLONASS with DC Injector

This device is an active 2 Way divider was designed for vehicle application allowing the signal form a single GPS antenna to be shared between two receivers. The unis is configured to insert 5 Volts DC to the antenna via the three pin power connector, while the output ports are DC loaded to simulate current draw. DC is blocked to the 2 output ports. Supply to the input port.

Specifications

Part Number AMA-2302A-2N Frequency 1200-1650 MHz

Return Loss -14dB typical all ports

Thru Loss 3.6 dB Typical
Amplitude Balance <=/- 2.0 dB
Impedance 50 Ohms
Input RF Power 10 Watts Max
Isolation 10 dB typical
Output Ports All DC Blocked

RF Input 5 Volts DC Regulated

DC Input 12-24 Volts DC

RF Connector N Female
